

# Viewing CSV Files II

---

Extend the CSV viewer application in the following way:

1. Each data record should be preceded by a record number.
2. Show which page is displayed out of how many in total below the table.
3. Let the user jump to a page by entering its number.

The display should look like this:

```
No. | Name | Age | City |
---+-----+----+-----+
1.  | Peter | 42  | New York |
2.  | Paul  | 57  | London   |
3.  | Mary  | 35  | Munich   |
Page 1 of 3
```

N(ext page, P(revious page, F(irst page, L(ast page, J(ump to page, eX(it
